PROFESSIONAL SUMMARY

Senior DevOps and SRE professional with extensive multi-year leadership in architecting, automating, and operating mission-critical services on GCP, Azure, and Kubernetes. Proven history of large-scale infrastructure savings, high-severity incident reduction, and advanced observability orchestration.

WORK HISTORY

Senior DevOps Engineer (SRE)	Grid Dynamics - American Eagle Outfitters	2021-12 - Current
• Troubleshoot applications on GCP and on premises, mainly focused on GKE, PubSub, CloudSQL. • Resolve slowness on the website, add to bag, throughput or bot attacks. • Provide Correction of Error documentation from the High Severity incidents. • Create and correct dashboards to determine the website reliability. • Create and enhance alerts to ensure issues are caught on time. • Follow up SRE ticket queue, coordinating with UI, Engineering, QA, Loyalty, Profile teams.		
DevOps Engineer	Softtek - Electronic Arts	2020-09 - 2021-12
• Worked as Observability Engineer providing accurate and constant metrics to trigger alerts and incidents. • Managed and sealed SSL certificates with Helm/Kubernetes secrets. • Integrated new routes to monitor and transmit metrics with RabbitMQ and Graphite apps.		
Senior DevOps Specialist	KIO Networks	2019-01 - 2020-09
• Architected high-availability Kubernetes clusters on client on-premise infrastructure. • Automated CI/CD workflows using GitLab CI, reducing deployment times by 45%.		
Infrastructure Lead	Softek - Enterprise Accounts	2017-06 - 2019-01
• Led a team of 6 engineers managing cloud migration initiatives for retail clients. • Standardized Terraform infrastructure-as-code modules across AWS and Azure.		
Cloud Operations Engineer	Neoris	2015-03 - 2017-06
• Managed Linux server fleets, patching security vulnerabilities and optimizing kernel performance. • Configured automated backups and disaster recovery protocols for mission-critical client databases.
