

ENRIQUE FARIAS RODRIGUEZ

Site Reliability Engineer · DevOps Engineer

+52 811 821 3655 · enriquefariasrdz@gmail.com · Monterrey, Nuevo León, MX · Open to Remote · [Portfolio](#) · [LinkedIn](#)

PROFESSIONAL SUMMARY

Site Reliability Engineer and DevOps Engineer with 8 years of experience building and operating highly available, cloud-native platforms on GCP and AWS. Delivered a 60% reduction in deployment lead time through CI/CD modernization, eliminated \$10M+ in annual monitoring vendor costs via open-source observability tooling, and cut SLA penalty exposure by 25%+ through proactive alerting and incident engineering. Google Cloud Professional Cloud Architect. Brings deep expertise in Kubernetes (GKE, EKS), Infrastructure as Code (Terraform, Helm, ARM), and observability pipelines (Grafana, Splunk, Elastic Stack, New Relic).

CORE COMPETENCIES

Cloud Platforms: GCP (GKE, Cloud Run, Pub/Sub, Cloud SQL, Artifact Registry) · AWS (EKS, IAM, ECR)

CI/CD & Automation: GitHub Actions · ArgoCD · Spinnaker · Jenkins · GitOps Workflows · Maven ·

Container Orchestration: Kubernetes (GKE, EKS) · Helm · Docker · Cloud Run (serverless)

Observability: Grafana · Splunk · Elastic Stack · New Relic · Zabbix · Graphite

IaC & Languages: Terraform · HCL · Python · Bash · SQL · Java ·

SRE Practices: SLI/SLO/SLA design · Incident Management · Chaos Engineering · CoE documentation

Messaging: Cloud Pub/Sub · RabbitMQ · IBM MQ

PROFESSIONAL EXPERIENCE

DevOps Engineer *Oct 2025 — Present*

Grid Dynamics *Guadalajara, Mexico (Remote)*

- ▶ Architected GitHub Actions CI/CD pipelines that standardized release processes across teams, cutting deployment lead time by 60% and reducing manual intervention errors.
- ▶ Jenkins pipelines deploying IAM permissions, Quality Assurance in combination with Maven.
- ▶ Containerized the Catalog Enrichment service and deployed it to GCP Cloud Run, enabling serverless auto-scaling and eliminating idle infrastructure costs.
- ▶ Provisioned and managed a high-availability Cloud SQL instance as the backend for a Vite/React web platform, ensuring 99.9%+ database uptime.
- ▶ Python application integrated Nvidia AI inference APIs into the deployment pipeline, enabling application-layer ML capabilities without dedicated GPU cluster management.

Site Reliability Engineer *Oct 2024 — Oct 2025*

Grid Dynamics — The Home Depot *Guadalajara, Mexico (Remote)*

- ▶ Maintained and improved multi-team CI/CD pipelines across GCP and Kubernetes environments, reducing deployment friction and accelerating feature delivery velocity.
- ▶ Use of Jenkins for Legacy applications, provisioning different filters for PubSub, some permissions could be granted with incidents but Production level always required a Change request.
- ▶ Implemented Grafana-based observability with automated alerting rules, reducing noisy, non-actionable incident cycles and improving mean time to detection (MTTD).
- ▶ Partnered with engineering teams on SLO definition and burn-rate alerting to surface reliability risks before SLA thresholds were breached. Python and Typescript to improve Open Policy Agent and CDK8s
- ▶ Ansible was used to perform some maintenance in Jenkins, Job Cleanup, Pipeline Optimization and Disk Space Management.

Site Reliability Engineer *Dec 2021 — Oct 2024*

Grid Dynamics *Monterrey, Mexico*

- ▶ Operated a GKE-based e-commerce platform at scale; resolved high-severity latency, throughput, and bot-attack incidents to restore service within SLA windows.
- ▶ Led incident response for P1/P2 events and authored Correction of Error (CoE) documents adopted org-wide to eliminate incident recurrence.
- ▶ Designed SLI/SLO dashboards in Grafana providing real-time reliability visibility for product and engineering stakeholders.

DevOps / Observability Engineer *Sep 2020 — Dec 2021*

Softtek — Electronic Arts *Guadalajara, Mexico*

- ▶ Built real-time metrics pipelines and alerting for gaming backends using Graphite and Grafana, enabling 24/7 production health visibility.
- ▶ Managed SSL certificate lifecycle via Helm and Kubernetes Secrets, eliminating certificate expiry incidents across multiple environments.
- ▶ Developed Python integrations to route application metrics through RabbitMQ into the observability stack, reducing data pipeline latency.

DevOps Engineer *Mar 2020 — Sep 2020*

Softtek Corporate *Guadalajara, Mexico*

- ▶ Built multi-environment Azure deployments using ARM templates and Azure DevOps pipelines for enterprise cost-tracking workloads.
- ▶ Engineered a high-availability database architecture with encryption at rest and Grafana health dashboards for anomaly detection.

DevOps Engineer (Observability) *Nov 2017 — Mar 2020*

Softtek — Staples *Guadalajara, Mexico*

- ▶ Replaced legacy monitoring tooling with a distributed, HA Splunk architecture, eliminating \$10M+ in annual vendor licensing costs.
- ▶ Monitored 100K+ on-premises servers and 200K+ Azure services/instances across all Staples stores in the US and Canada.
- ▶ Defined role-based dashboards per department and integrated SSO with granular permission inheritance, reducing access provisioning time.

Splunk Developer / Team Lead — Production Support *Nov 2013 — Nov 2017*

TCS — Morgan Stanley *Guadalajara, Mexico*

- ▶ Designed Splunk searches and alert logic that detected network anomalies early, reducing SLA penalty exposure by 25%+.
- ▶ Led production support for 30+ global Java/Scala environments; managed disaster recovery, on-call rotations, and fault-tolerant architecture design.
- ▶ Trained new team leaders in cross-functional incident coordination and promoted multiple trainees to senior engineer level.
- ▶ Received QAPM CIO Consultant Award (Morgan Stanley, Aug 2015) and Employee of the Year (Atos, 2011) for operational excellence.

CERTIFICATIONS

Google Cloud Professional Cloud Architect — Google Cloud *Valid through Feb 2028*

EDUCATION

BBA — Business Administration & Tourism *1998 — 2002*

Instituto Regiomontano de Hotelería A.C. · Monterrey, Mexico · GPA 3.7
